"Not following through with the abortion pill has been a tremendous blessing. My little girl is the joy of my life and I truly don't know what I would do without her. I am so thankful God placed people in my path who were able to make sure my little angel had a chance at life."

IS IT REALLY NOT TOO LATE?

Do not take the second pill if you want to reverse the abortion. Whatever you decide, medical attention is your next vital step. Contact the Abortion Pill Reversal 24/7 hotline immediately. The hotline will refer you to a Pregnancy Help Center. To reverse the abortion, the Pregnancy Help Center will administer the reversal medication at no charge. Reversing the abortion cannot be guaranteed but the chances of success are highest the sooner you take the reversal medication. Studies show a success rate of 64-68% if the medication is taken within the first 72 hours. * The Pregnancy Help Center will also most likely give you an ultrasound and you will be able to see your baby.

For assistance with material needs for your baby:

HOW THE ABORTION PILL WORKS

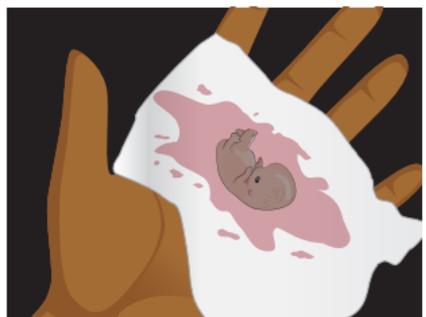

1. Progesterone is the hormone that protects the lining of your uterus. The first pill, RU-486, blocks your progesterone and causes your uterine lining to break down.

2. The RU-486 cuts off blood and nourishment from your baby. The goal is to starve your preborn child to death.

3. 24-48 hours later the second pill, Misoprostol, is taken which causes contractions that can cause painful cramping and heavy bleeding to trigger a miscarriage.

4. You will be told to miscarry at home over your toilet. If you (were to) look closely, you would see your dead child. Even at only 7 weeks, you will likely see his or her fingers & toes.
